

Dear Carine,

Is there any option to adjust the screen proportions in isams for the window where I read and validate mentor comments? They do not adjust to window scaling within chrome via the option buttons or the mouse scroll wheel?

I cannot read an entire comment without scrolling due to the space required for the MCompetences... It is a change that would allow us to read the entire subject course, mcs and comment in one go and in doing so improve the accuracy, precision and speed of entry for many!

The proportions of the screen appear fixed, even if I maximize the window! All it does is add extra space to the bottom of the window, below the comment box!

Sincerely,

Chris
